Introduction.....	5
How to Use This Handbook.....	6
Chapter 1. What Is AI and Why Is It Important?	7
1.1. AI Definition and Significance	7
1.2. AI in Action	Error! Bookmark not defined.
1.3. Advantages for Researchers, Professionals, and Students	Error! Bookmark not defined.
1.4. Resolving Myths and Ethical Issues	Error! Bookmark not defined.
1.5. Reasons to Be Concerned	Error! Bookmark not defined.
Chapter 2. Fundamentals of AI	Error! Bookmark not defined.
2.1. Using Prompts.....	Error! Bookmark not defined.
2.2. Free AI Tools: What They Are and How to Use Them ..	Error! Bookmark not defined.
2.3. Software and Hardware Requirements..	Error! Bookmark not defined.
2.4. Setting Up AI Platform Accounts	Error! Bookmark not defined.
2.5. Responsible Use and Data Privacy	Error! Bookmark not defined.
Chapter 3. Handling AI Interfaces	Error! Bookmark not defined.
3.1. Overview of Typical AI Tool Interfaces.....	Error! Bookmark not defined.
3.2. How to Ask Powerful Questions to Get Better Outcomes	Error! Bookmark not defined.
3.3. Solving Typical Problems.....	Error! Bookmark not defined.
3.4. Practice Exercises	Error! Bookmark not defined.
Chapter 4. AI for High School and Undergraduate Students	Error! Bookmark not defined.
4.1. Free Tools for Learning	Error! Bookmark not defined.
4.2. AI at Home.....	Error! Bookmark not defined.
4.3. Time Management and Study Planning	Error! Bookmark not defined.
4.4. Making Practice Tests, Summaries, and Flashcards	Error! Bookmark not defined.

4.5. Exam Preparation for Students.....	Error! Bookmark not defined.
Chapter 5. Graduate Students' Guide to AI	Error! Bookmark not defined.
5.1. Tools for Advanced Learning	Error! Bookmark not defined.
5.2. Summarization of Texts	Error! Bookmark not defined.
5.3. Developing Concepts and Organizing Arguments	Error! Bookmark not defined.
5.4. Tools for Collaboration on Group Projects .	Error! Bookmark not defined.
5.5. An example of a graduate student planning a thesis	Error! Bookmark not defined.
Chapter 6. Artificial Intelligence for Continuous Education	Error! Bookmark not defined.
6.1. Life Learning and AI.....	Error! Bookmark not defined.
6.2. Language Learning	Error! Bookmark not defined.
6.3. News Summarizers	Error! Bookmark not defined.
6.4. Customizing Career Development	Error! Bookmark not defined.
Chapter 7. AI in Managing Research	Error! Bookmark not defined.
7.1. Free Literature Reviews by Semantic Scholar, ResearchGate, and Google Scholar	Error! Bookmark not defined.
7.2. AI to Find Related Papers	Error! Bookmark not defined.
7.3. Mendeley and Zotero to Arrange References	Error! Bookmark not defined.
7.4. Lawfully Avoid Paywalls.....	Error! Bookmark not defined.
7.5. Analyzing survey data.....	Error! Bookmark not defined.
Chapter 8. AI in Writing and Publishing	Error! Bookmark not defined.
8.1. Drafting of Research Paper	Error! Bookmark not defined.
8.2. Reach Clarity and Paraphrasing Without Plagiarism	Error! Bookmark not defined.
8.3. Formatting Bibliographies and Citations	Error! Bookmark not defined.
8.4. Abstract and Presentation Creation	Error! Bookmark not defined.
Chapter 9. Visualization and Analysis of Data	Error! Bookmark not defined.

- 9.1. Data Analysis Free Tools.....**Error! Bookmark not defined.**
- 9.2. Create Charts and Visualizations **Error! Bookmark not defined.**
- 9.3. Basic AI-Driven Statistics.....**Error! Bookmark not defined.**
- 9.4. Case Study: Presenting Survey Findings**Error! Bookmark not defined.**

Chapter 10. Artificial Intelligence for Civil Servants and Business Professionals**Error! Bookmark not defined.**

- 10.1. Simplify Workflows.....**Error! Bookmark not defined.**
- 10.2. Composing Expert Reports and Emails**Error! Bookmark not defined.**
- 10.3. Automating Repetitive Tasks**Error! Bookmark not defined.**
- 10.4. Meetings and Presentations...**Error! Bookmark not defined.**
- 10.5. A Civil Servant Writing a Policy Brief**Error! Bookmark not defined.**
- 10.6. Business Perceptions.....**Error! Bookmark not defined.**

Chapter 11. Artificial Intelligence and Medical Workers**Error! Bookmark not defined.**

- 11.1. Free AIs for Medical Education..... **Error! Bookmark not defined.**
- 11.2. Writing up medical records or directives ...**Error! Bookmark not defined.**
- 11.3. AI to Keep Up with Medical Research**Error! Bookmark not defined.**
- 11.5. A Doctor Investigating an Unusual Illness. Case Study.
.....**Error! Bookmark not defined.**

Chapter 12. How Artificial Intelligence is Used Everyday**Error! Bookmark not defined.**

- 12.1. Calendars for Individual Productivity . **Error! Bookmark not defined.**
- 12.2. Finance and Budgeting Powered by AI**Error! Bookmark not defined.**
- 12.3. Creative Projects: Writing and Design **Error! Bookmark not defined.**
- Advice for Everyone:.....**Error! Bookmark not defined.**
- 12.4. AI for Health and Wellbeing.**Error! Bookmark not defined.**
- 12.5. AI Tools for Daily Tasks**Error! Bookmark not defined.**
- 12.6. Artificial Intelligence for Mobile Devices .**Error! Bookmark not defined.**

Chapter 13. The Future of Free AI....	Error! Bookmark not defined.
13.1. New Developments for Work and Education	Error! Bookmark not defined.
13.2. Keep Up with New Tools.....	Error! Bookmark not defined.
13.3. Ethics in AI	Error! Bookmark not defined.
Chapter 14. Building Your AI Toolkit	Error! Bookmark not defined.
14.1. Suggested Free Tools	Error! Bookmark not defined.
14.2. Making Use of and Trying Out AI Tools..	Error! Bookmark not defined.
A glossary	Error! Bookmark not defined.
Resources	Error! Bookmark not defined.
Addendum 1	Error! Bookmark not defined.
Acknowledgments.....	Error! Bookmark not defined.
Index: Find topics and tools	Error! Bookmark not defined.

Even though I believe deeply in the idea of "investing in yourself," real growth takes something more valuable than money — it takes TIME.

You need to give yourself the space to study, apply what you've learned, analyze the outcomes, iterate (again and again), and keep trying.

That's not a course.

That's the real investment in yourself.

Introduction

Artificial intelligence (AI) is a force revolutionizing how we work, learn, and live; it is no longer a sci-fi or expert-only concept. AI provides tools that make tasks easier, faster, and more efficient for everyone, from students doing their homework to researchers finding new insights, doctors staying up to date on medical advancements, and civil servants streamlining public services. With an emphasis on education, scholarly research, and daily needs, this handbook aims to make the power of free AI tools accessible to everyone, regardless of technical expertise.

Why is artificial intelligence important? AI can help high school and college students study more easily, be more creative, and develop future-ready skills. Researchers and graduate students can use AI to manage large volumes of data, plan intricate projects, and share results. Professionals in a variety of industries, including business, healthcare, and government, can use AI to increase output, find solutions to issues, and maintain their competitiveness. But it's simple to feel overwhelmed or unsure of where to begin when there are so many tools at your disposal. This handbook can help with that.

This book's goal is straightforward: it demystifies artificial intelligence and offers helpful, step-by-step instructions for utilizing freely available, and occasionally paid, tools that are available to everyone. All you need is curiosity and a willingness to learn; no costly software or coding expertise is required. In roughly 140 pages, we'll introduce you to AI tools that are specifically designed to meet the needs of professionals, researchers, and students. These tools can

assist with writing, organizing, studying, and more. We'll also go over how to use AI responsibly so you can confidently and ethically take advantage of its advantages.

This handbook serves as a foundation—a road map to assist you in incorporating AI into your personal, professional, and academic life. AI can help whether you're a high school student getting ready for an exam, a researcher writing a paper, or a professional juggling a hectic schedule. Together, let's set out on this adventure and discover how AI can improve your learning, productivity, and well-being.

The issue with writing books and guides about artificial intelligence is that advancements, modifications, and the introduction of new, cutting-edge technologies happen so swiftly that the publication may be outdated before it is finished. In this edition, we have tried to present the material in such a form and refer to such resources that are universal and will not become outdated over time. This can be achieved by generalizing the recommendations, describing only the main functions and capabilities of the AI resources under consideration, and trying not to mention commercial, consumer details of the resources presented on the market. Fierce global competition between AI developers leads to an extremely rapid expansion of the variety of products offered, improving their quality and capabilities and reducing the cost of their use, which certainly pleases the consumer.

How to Use This Handbook

This book is intended for a wide range of readers, including high school students, college and graduate students, researchers, businesspeople, government employees, physicians, and anybody else who wants to use AI efficiently. This handbook will help you navigate free AI tools for education, academic research, and daily tasks with ease and confidence, regardless of your level of experience with AI or desire to add more tools to your toolkit.

Clear explanations, practical examples, and case studies catered to various audiences—such as a student organizing study notes or a physician summarizing medical guidelines—are included in every chapter. You'll find detailed instructions for accessible tools like Canva's AI features, Grammarly's free tier, and Google Scholar. Quick activities promote practical experience, and advice emphasizes avoiding typical pitfalls like ambiguous AI prompts or privacy issues.

This handbook is not a textbook; it is your companion. Read it quickly, delve deeply, or keep it close at hand for ideas. Our mission is to enable you to use AI responsibly and practically to improve your life and work without going over budget. Let's begin!

Chapter 1. What Is AI and Why Is It Important?

The way we live, work, and learn is being revolutionized by AI. AI provides tools to make your work more effective and significant, whether you're a doctor following medical guidelines, a researcher writing academic papers, or a high school student taking on math. This chapter explains AI, why it matters to you, and how it can improve your daily life, research, and education with both free and paid tools. To get you started on your AI journey, we'll go over real-world examples, list advantages for professionals, researchers, and students, and quickly go over common misconceptions and moral dilemmas.

1.1. AI Definition and Significance

Fundamentally, AI describes computer programs that carry out operations that normally call for human intelligence, like learning, reasoning, solving problems, or comprehending language. AI is capable of data analysis, pattern recognition, and decision-making, and it frequently gets better with time, unlike traditional software that is subject to rigid rules. For instance, a virtual assistant such as Google Assistant, which is available for free, can process your words and respond intelligently when you ask it to set a reminder or look

up information. AI is very useful because it can simulate human thought processes.

AI is relevant at all educational and professional levels. AI can help students make difficult subjects easier to understand, plan their study time, or inspire originality in their work. It saves hours of manual labor in academic research by assisting with source discovery, text summarization, and data visualization. Without requiring sophisticated technical knowledge, professionals use AI on a daily basis to plan meetings, draft emails, and keep abreast of market developments. The free resources we'll discuss in this handbook, such as Google Scholar and Grammarly's free tier, are made to be easily accessible and only need a device and an internet connection. Gaining proficiency with these tools will help you stay ahead of the curve in your studies, career, and other endeavors.

Within the field of artificial intelligence, the terms AI (Artificial Intelligence) and AGI (Artificial General Intelligence) refer to distinct concepts. Below is a summary of how the two differ from one another.

Any computational system that is capable of carrying out tasks that normally call for human intelligence is referred to as artificial intelligence (AI). This covers a wide range of strategies and tactics that enable machines to perceive, comprehend, learn, reason, and solve problems. AI comes in many forms.

Weak AI, or **narrow AI**, systems are made to solve particular issues or tasks. Examples include image recognition software, recommendation engines (like those used by Netflix or Amazon), and voice assistants (like Siri or Alexa). They perform exceptionally well at the tasks they are assigned, but they lack broader knowledge or skills. The types of narrow AIs that we can mention are as follows:

AI systems trained on labeled data are known as **supervised learners**.

AI programs that identify patterns in unlabeled data are known as **unsupervised learning** systems.

Reinforcement Learning: AI systems pick up new skills through feedback and interaction with their surroundings.

Although narrow AI systems can perform better than humans in certain tasks, they lack the capacity to generalize their knowledge or abilities across domains.

Artificial General Intelligence (AGI)

The term artificial general intelligence (AGI) describes a subset of AI that is indistinguishable from human cognitive abilities in its comprehension, learning, and application of intelligence. Any intellectual task that a human can complete would be able to be completed by AGI.

Like humans, AGI is able to transfer knowledge and skills from one domain to another. Additionally, without requiring extensive retraining, AGI can solve problems it has never encountered before and adapt to new situations. It would be able to plan and carry out tasks in complex environments and possess sophisticated reasoning abilities. AGI is still primarily a theoretical idea as of right now (June 2025). Even though narrow AI has advanced significantly, scientists have not yet created a system that can match human intelligence's generality and flexibility.

In conclusion, the degree of intelligence and capability is the primary distinction between AGI and AI. AGI strives for a more comprehensive, human-like comprehension and reasoning ability that can be applied to a wide range of tasks across various domains, whereas AI (especially narrow AI) concentrates on specific tasks and functions. Even though narrow AI is widely used in many applications today, artificial general intelligence (AGI) is still being studied and discussed.

Advanced AI systems called Large Language Models (LLMs) are made to comprehend and produce text, images, audio, and video that resembles that of a human.

Two distinct LLM models, GPT-4 and Gemini, were created by Google (Gemini) and OpenAI (GPT4). GPT-4 and other ground-

breaking AI technologies were developed by OpenAI, a top AI research company with a close working relationship with Microsoft.

Generative Artificial Intelligence (GenAI) is a technology that uses machine learning algorithms that have been trained on vast amounts of data to produce original content, including sounds, texts, and images. In contrast to other types of AI, it can produce original and unheard-of results like writing, music, digital art, and photorealistic images. These products frequently have a distinct style and can even be difficult to tell apart from works that were created by humans. Numerous domains, including computer science, art, entertainment, marketing, science, and technology, have found use for GenAI.

An application that functions independently as a specialized platform for AI interactions as opposed to being a feature integrated into another app or service, is known as a standalone AI app. Without depending on integration into pre-existing platforms like messaging apps or social media services, these apps are made to give users direct access to AI-powered features like conversation, image generation, or personalized recommendations.

Applications that incorporate AI as a feature into a larger system, gadget, or software platform as opposed to functioning as a stand-alone, standalone app are known as non-standalone AI apps. These are frequently referred to as AI-powered features or embedded AI applications in already-existing products. Non-Stand-Alone AI apps include robotics and machines that use AI for precision moving, quality control, and predictive maintenance; self-driving features and driver assistance systems (like in Tesla EVs); smart home services where AI is integrated into the firmware or app of the device rather than being a separate application (thermostats, lights, security cameras, etc.); and medical equipment that uses embedded AI for health monitoring and diagnostics within the device itself.

AI Agents or Agentic AI

Agentic AI functions somewhat independently, in contrast to conventional AI models that depend on particular inputs to generate preset outputs. Like humans, these systems can plan, carry out,
